Sinks and tubs have overflow protection - why not toilets?

A Marco Plumbing Ltd., in conjunction with Plumbers Supply, now offers direct and affordable installation of the only toilet in Canada with a patented secondary drain system that adds protection against overflow. This revolutionary toilet allows the contents to drain out through a separate drain line in the event of a clog on the main trap. This secondary drain system adds protection to a toilet against overflow!

Ready for use in new construction or use as a drop in replacement for all standard toilets, there is no need to re-pipe or replace existing plumbing system. Simply remove the old toilet and install the new Penguin toilet. You will be protected with the exclusive Penguin Protection Technology.
